## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-10 are rejected under 35 U.S.C. 102(e) as being anticipated by Jones et al., (US 6,438,638)

As per claims 1 and 7-10, Jones teaches an USB removable memory with replaceable storage medium for optional upgrade and extension of the storage capacity, including an USB connector, a controller (USB chip, Fig. 10) and a replaceable flash memory (CompactFlash, 16), characterized in that: said USB

Art Unit: 2182

connector (Fig. 9, 46) and said controller (Abstract, col. 9, lines 42- col. 11, lines 1-22) are integrated as a memory body, and said memory body does not include any built-in flash memory; the replaceable flash memory (16) as a physically-independent storage component is replaceably and directly is attached to the body (Fig. 10), and is electrically connected to the controller for the controller to read from or to write to the flash memory. Jones teaches a portable USB data storage device without a built in flash memory storage and a connector interface (62) that can attach/detach a flash memory card (16).

As per claims 2-5, Jones teaches said flash memory part is mounted on the body by means of guide channel and said flash memory part is mounted on the body by means of plug-in connection or elastic fastener connection. (Figs. 6-10)

As per claims 6 and 7, (Fig. 9) teaches the electrical connection between said flash memory part and said controller is elastic tip-touch connection or plug-in connection.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-10 are rejected under 35 U.S.C. 102(e) as being anticipated by Shieh et al., (US 2002/0185533)

As per claims 1 and 7-10, Shieh teaches an USB removable memory with replaceable storage medium for optional upgrade and extension of the storage capacity, including an USB connector (4, Figs. 3,4), a controller (USB controller, 30, Fig. 4,5) and a replaceable flash memory (40, Fig. 5), characterized in that: said USB connector (50) and said controller (Abstract, [0017-0018]) are integrated as a memory body, and said memory body does not include any built-in flash memory; the replaceable flash memory (40) as a physically-independent storage component is replaceably and directly is attached to the body (Fig. 3), and is electrically connected to the controller for the controller to read from or to write to the flash memory. Jones teaches a portable USB data storage device without a built in flash memory storage and a connector interface that can attach/detach a flash memory card.

As per claims 2-5, Shieh teaches said flash memory part is mounted on the body by means of guide channel and said flash memory part is mounted on the body by means of plug-in connection or elastic fastener connection. (Figs. 3-6)

As per claims 6 and 7, (Figs. 3, 4) teaches the electrical connection between said flash memory part and said controller is elastic tip-touch connection or plug-in connection.
